

Dr. Marcin Klisz, Eng.

My research focuses on population genetics and dendroecology, and in particular on intra-specific growth variation of forest trees under unstable climatic conditions. My studies include long-term, multi-environmental provenance experiments in the temperate climate zone in Europe. My current projects relate to the acclimatization of non-native trees in Europe. I am currently developing a pan-European tree ring network for Douglas-fir covering the southern Baltic region at the boundary of three bioclimatic zones (temperate continental, oceanic, southern boreal). The aim of the project is to determine the spatio-temporal variation in climate sensitivity of Douglas-fir and to predict future climate-growth relationships considering optimistic and pessimistic climate scenarios. In combination with species distribution modeling, this could allow the development of new strategies for the management of non-native tree species in Europe.
